David Williams–Young, Ph.D.

Principal Quantum Architect
Microsoft Quantum
Microsoft Corporation
One Microsoft Way, Redmond, WA 98052

PROFESSIONAL INTERESTS

- Architecture and development of software for quantum computing applications.
- Quantum algorithms for chemistry and materials science, including state preparation and circuit synthesis.
- Human-in-the-loop AI systems to accelerate scientific discovery, methods development, and HPC optimization.
- The intersection of high-performance computing and quantum information science.
- Development of high–performance electronic structure methods on emerging architectures.
- Development and microarchitecture optimization of high–performance linear algebra software.
- Leverage of modern C++ to develop clean, reusable, and extensible scientific software.

PROFESSIONAL EXPERIENCE

Principal Quantum Architect ..... September 2026 – Present
Principal Quantum Software Engineer ..... August 2024 – September 2026
Microsoft Quantum
Microsoft Corporation, Redmond, WA

- Lead engineering for Microsoft Quantum's applications software as both engineering manager and technical architect, owning product architecture and direction for QDK/Chemistry and QDK/Analytics.
- Architected QDK/Chemistry, Microsoft's open-source quantum chemistry platform, unifying classical electronic structure, quantum algorithms, and third-party packages in a single modular toolkit.
- Led the integration of AI into the group's R&D workflows across algorithm discovery, methods development, and HPC optimization, compressing development, integration, and optimization work that previously took months into days.
- Established a human-in-the-loop approach to AI-assisted science: built the grounding and steering harness behind these workflows and led the team in applying AI as a force multiplier for deep domain expertise in highly specialized work, not a substitute for it.
- Brought production-grade HPC to quantum workflows, drawing on a decade of GPU and distributed-memory library development (GauXC, MACIS) to deliver QDK/Chemistry's scalable classical simulation layer.
- Previously technical lead for Accelerated DFT, Microsoft's GPU-accelerated cloud service for density functional theory.

Research Scientist (Career) ..... March 2023 – August 2024
Research Scientist (Career-Track) ..... February 2021 – March 2023
Postdoctoral Fellow ..... July 2018 – February 2021
Applied Mathematics and Computational Research Division
Lawrence Berkeley National Laboratory, Berkeley, CA

- Created GauXC, ExchCXX, and MACIS: open-source libraries for GPU-accelerated density functional theory and massively parallel selected configuration interaction, since adopted by NWChemEx, ExaChem, Psi4, MPQC, and QDK/Chemistry.
- Delivered the GPU-accelerated DFT capability of NWChemEx, the DOE Exascale Computing Project's computational chemistry application, targeting DOE leadership computing facilities.
- Authored 27 publications spanning exascale electronic structure, numerical linear algebra, and quantum algorithms; served on the NWChemEx Executive Board.

Graduate Research Assistant ..... July 2013 – July 2018
Graduate Teaching Assistant ..... September 2013 – July 2018
Department of Chemistry
University of Washington, Seattle, WA

EDUCATION

Doctor of Philosophy (Ph.D.), Chemistry ..... May 2018
University of Washington, Seattle, WA
Adviser: Dr. Xiaosong Li
Dissertation: *Towards Efficient and Scalable Electronic Structure Methods for the Treatment of Relativistic Effects and Molecular Response*

Bachelor of Science (B.S., *Magna Cum Laude*), Chemistry, Mathematics ..... May 2013
Indiana University of Pennsylvania, Indiana, PA
Adviser: Dr. Jaeju Ko

COMPUTATIONAL PROFICIENCY

I am a specialist in the following computational areas:
- *Programming Languages:* C++, CUDA
- *Libraries / Paradigms:* OpenMP, MPI, BLAS/(Sca)LAPACK

I am very proficient in the following computational areas:
- *Programming Languages:* C, FORTRAN 77/95/03, HIP, SYCL
- *Scripting Languages:* Python, Julia, Octave, C/Bash Shell
- *Libraries / Paradigms:* TBB, OpenACC
- *Software:* Mathematica, MATLAB

I am the lead architect of the following software packages:
- **QDK/Chemistry**: Open-source toolkit for quantum chemistry applications on quantum computers (Microsoft)
- **QDK/Analytics**: Quantum algorithms for data analytics (Microsoft)

I am the primary developer of the following open-source software packages:
- **GauXC**: Enabling high-performance density functional theory calculations on exascale architectures
- **MACIS**: Massively parallel selected configuration interaction methods
- **ExchCXX**: GPU-accelerated library for the evaluation of exchange-correlation functionals
- **IntegratorXX**: Numerical quadrature for molecular integration grids

I have contributed to the development of the following software packages:
- Accelerated DFT (Microsoft)
- The Chronus Quantum (ChronusQ) Software Package
- NWChemEx
- Psi4
- Massively Parallel Quantum Chemistry (MPQC4)
- TiledArray
- Gaussian

PUBLICATIONS
46 in press publications, 5 preprints
* Indicates equal contribution to published work.
† Indicates that the publication was invited.
